Hi Michael,

Yes the fields will be ploughed and disked, we're just waiting on Walkers to confirm with their tenant farmer on when that will be done. Anticipated in June at this point, as soon as I can firm that up I'll be sure to let you know. Trying to get that information now.

I do not have a copy of a signed agreement with SON, but, confirmation of payment having been made for SON monitors. Dr. Martin visited the site last fall and found the fields were not acceptable at that time, which is why things have been delayed to this year.

Matt

Matt,

Are all of the agricultural fields going to be ploughed and disked and free of vegetation this spring?

Do you have a signed agreement with SON? They will require that there is an agreement with the proponent with them to allow them to do the work and to get paid for their involvement.

With Kind Regards,

Hi Michael and Marilyn,

Hope you're well – I sent the below email to Alex, didn't realize he no longer works with you. Can you please review and confirm that fieldwork at the Walker Redford Pit expansion is on your list for June/July of this year, and that you'll coordinate with SON for monitors to be present?

Thanks and have a great weekend.

Hi Alex,

Hope that you're doing well. Wanted to reach out to you about this project to get it back on your radar – Walker is working with the farmer on this property to confirm when the crop of barley they planted will be harvested and then the fields dried and ready for archaeological investigation with

planted will be harvested and then the fields disced and ready for archaeological investigation with SON monitors. It's anticipated that this won't occur until June at this point, but one of those things we don't want to lose sight of given the delay we unfortunately experienced last year.

If you can just confirm for me receipt of this email and that this site is on the to do list for a couple of months time that would be great.

Have a great weekend!

Hi Alex,

Just wanted to advise that Dr. Robert Martin at SON visited the site this past Friday and discussed with Walker staff, and advised that the fields are not in suitable condition for SON to accept the archaeological assessment being completed now. Evidently the fields were planted and then rolled after planting, so SON won't accept the work being completed.

It was agreed that the fieldwork for your study would have to be held until +/- July 2024 once the current crop of barley that was planted comes off, and the fieldwork would be completed with SON monitors present.

I would assume your Stage 1 work could still proceed though honestly not sure of the rush need for it at the moment – let me know your thoughts on that. Otherwise your study will have to be picked up next summer.

Thanks,
Matt

Good morning Matt,

Not a word from SON I'm afraid. I've tried 3 or 4 times now to get a response from their coordination officer and have come up with nothing. We have a crew that can be ready to mobilize straight away Monday morning if you'd like to just proceed with the fieldwork.

If the farmer wants to plant crop soon, then they are welcome to do so. It does not have an immediate impact on our ability to conduct our pedestrian survey. We can still assess the fields with planted crop, so long as it has not grown tall enough to interfere with ground surface visibility for our assessment. Please let me know how you'd like to proceed.

Hi Alex,

Walker is issuing the cheque today for SON for the archaeology monitoring, so SON should have that before the end of the week. If you can go ahead and coordinate them to potentially get out next week if possible? As noted the farmer is wanting to plant winter barley so the work does need to get done somewhat soon.

Let me know if I can be of assistance.

Hi Alex,

Just touching base on this – I understand SON issued an invoice to Walkers for monitors, just trying to firm up that Walker has actually paid it. In the meantime, are you and your forces set up and ready to commence? The farmer on the property is hoping to plant winter barley this month so time is of the essence. The work may have to go ahead regardless of SON being there.

I'll update more as soon as I hear from Walker, but in the meantime if you could please coordinate getting things scheduled and discussing with SON the monitors that would be appreciated.

Matt

Good morning,
How many days are being estimated for the assessment? In order to schedule this work SON will need to prepare a letter of agreement or invoice for the proponent that will provide for the monitoring/review and the cheque will have to be received prior to scheduling. A site visit may be necessary to make sure that field conditions are appropriate to undertake the survey.

Hope you are doing well. The agricultural fields at 133832 Allen Park Road, West Grey have been worked and should be good to walk now. I was wondering if you would have any liaisons available for this week to join us for the assessment? We would likely need to be out there for 4-5 days so it would also extend into next week. Let me know if you would have anyone available this week or next week. Just want to make sure we get out there while conditions are good. Look forward to hearing from you.

Thanks,
Garrett Gribbin

Good morning Garrett,

SON Archaeology will need to ensure that the field has been properly prepared, can you confirm that the field has been moldboard ploughed / disced?

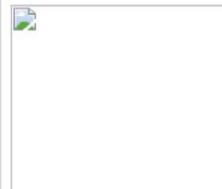

Can the proponent provide photos of the field conditions? SON Archaeology may need to conduct a site visit to confirm acceptable field conditions.

I don't believe we have received any project notifications with proposed work plan for this assessment either, if you can provide more information we can review and respond.

Just a reminder that the office requires at least 2 weeks notice in scheduling fieldwork and liaisons, but it is possible that we may be able to arrange for Archaeology monitors sooner if acceptable field conditions/work plan can be confirmed.
